

## MATLAB Project#4 (Intelligent Systems-Summer 2019)

Problem#1: Let's select  $c/m = 0.2$ ,  $k/m = 0.4$  and  $1/m = 0.2$  for the figure 2. Select  $x(0) = 1$  and  $\dot{x}(0) = 0$ . Simulate the model for step input.

Problem#2: Let's select  $c/m = 1$ ,  $k/m = 1$  and  $m = 1$ . Repeat problem#1

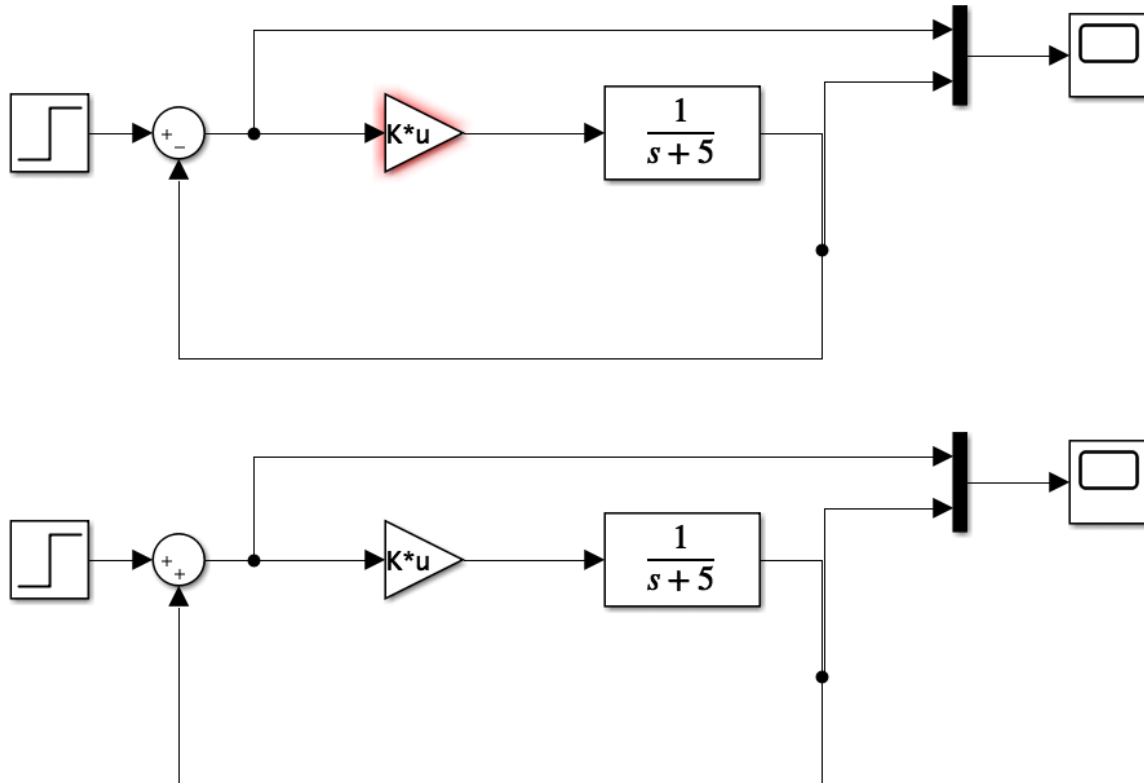

Problem#3: Draw the diagram for problem#1 in one block (as shown in figure3) then repeat the simulation.

**SpringMassDashpot**

Problem#4:

(I) Select  $k = 1, 5, 10$  for positive and negative feedback systems. Observe the output with the step input. What is the effect of  $k$  to the output response?

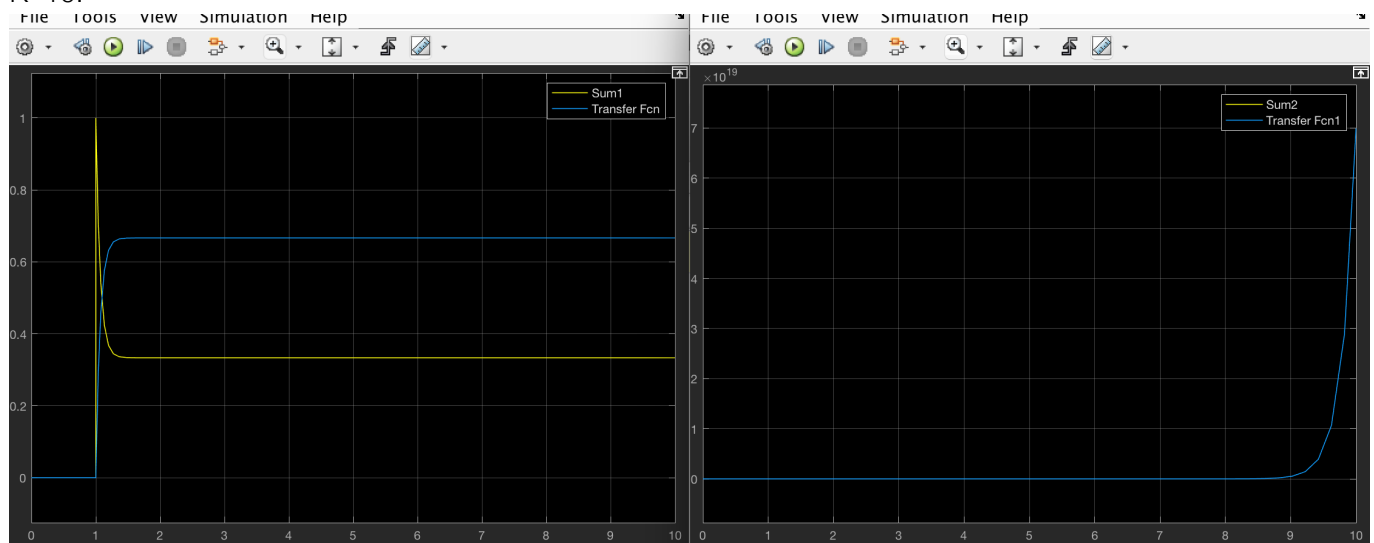

$K=1$ :

$K=5$ :

$K=10$ :

(II) change your input to a pulse generator(Select the value of your input p parameters as desire). Show your output for  $K=50$
